## Introduction to the ASDA-M Series

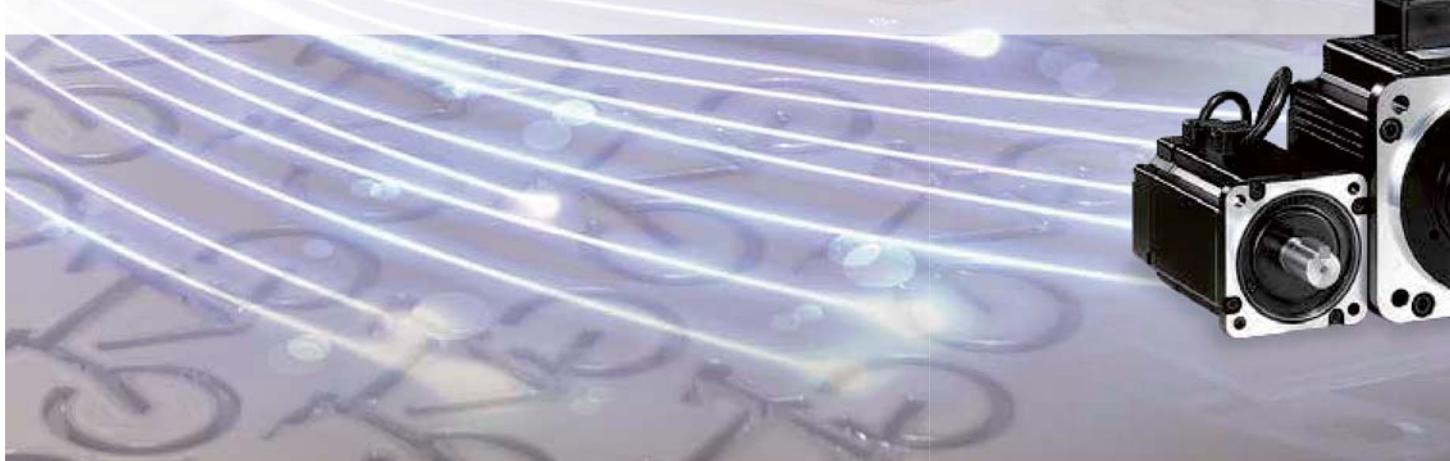

Delta's ASDA-M Series is a three-axis intelligent AC servo system which has successfully integrated control, motion and drive into one servo system and is ideal for multi-axis motion control applications. With this innovative 3-in-1 design, the ASDA-M demonstrates a perfect combination of motion controller and servo system, and has received excellent feedback from customers.

The development of the ASDA-M is in response to positive market feedback on our ASDA-A2. The ASDA-M offers high resolution, high frequency response, built-in electronic cam (E-Cam), auto notch filters, vibration suppression, full-closed loop control, friction compensation and a more flexible position register control PR mode. It also provides strong motion control functions and advanced design to meet a variety of applications for all types of industrial automation machines.

The ASDA-M goes beyond the typical servo drive. It includes 3 axes servo drives in one frame to provide 3 axes synchronous motion control and it supports real-time data exchange among 3 axes without any time delay. Users can perform 3-axis linear / arc / helical interpolation functions easily. In addition, the ASDA-M features a new gantry control function for synchronous control that is precisely adapted to pure rigid mechanical systems. The upgraded ASDA-Soft software provides a built-in contour analysis function to strengthen system diagnosis capabilities.

The ASDA-M supports DMCNET and CANopen communication protocols. Connecting to DMCNET extension digital input and output modules increases system extension flexibility and control needed for application customization. The CANopen and RS-485 interfaces enable the servo system to integrate with other parts of the automation more efficiently and effectively.

The ASDA-M is a highly-integrated servo system that demonstrates Delta's expertise in innovation and integration, giving a new definition to servo system and offering a new automation vision for a changing world.

## ASDA-M Series Features

### Highly Integrated System

- Built-in motion control and PLC functions
- Multi-axis synchronous interpolation
- Advanced gantry control
- Flexible electronic cam (E-Cam) function
- High-speed frequency response
- Excellent vibration and resonance suppression
- High-precision full-closed loop control
- Versatile PR mode
- Real-time Capture and Compare functions

DMCNET  
High-Speed Motion Control

### Real Time, Reliable and High-Speed Motion Control Network

- Supports DMCNET and CANopen communication protocols.
- With the aid of Delta's Human Machine Controller (HMC), it can establish an integrated system configuration by DMCNET.
- Supports DMCNET interface for I/O extension modules.

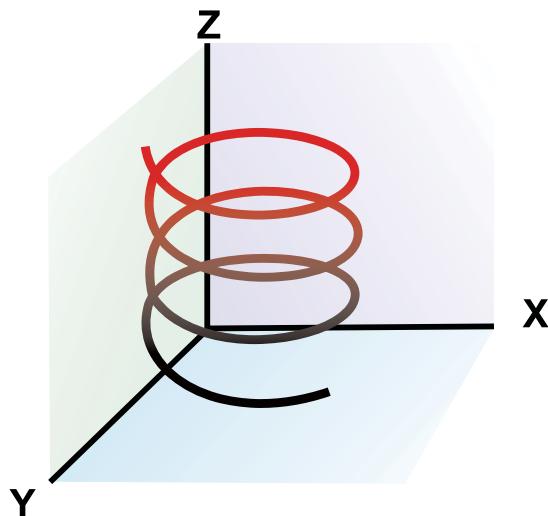

### High Precision, High Performance

- Supports incremental type and absolute type encoders.
- Incremental type encoder provides up to 1280000 p/rev resolution for high-precision positioning.

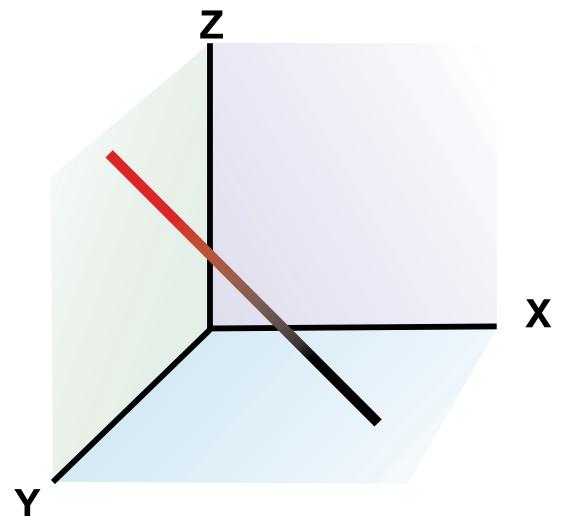

# ASDA-M Series Features

## Multi-Axis Synchronous Interpolation

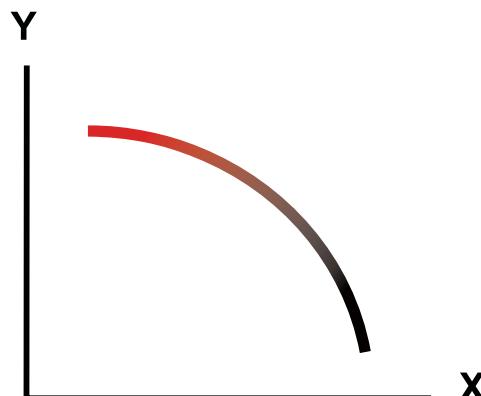

- A variety of interpolation functions maximize the motion control performance of the ASDA-M Series.
- Interpolation commands are generated by the algorithm from the ASDA-M Series to offer high synchronous control accuracy.

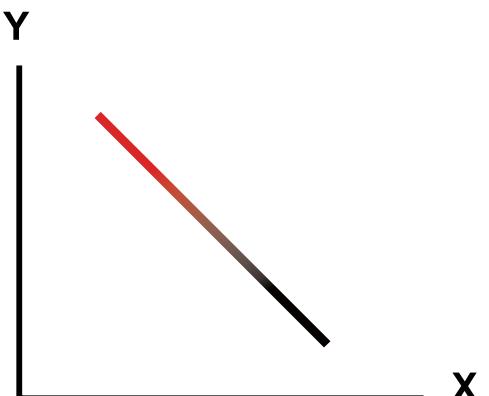

3-Axis Helical Interpolation

3-Axis Linear Interpolation

2-Axis Arc Interpolation

2-Axis Linear Interpolation

## Advanced Gantry Control

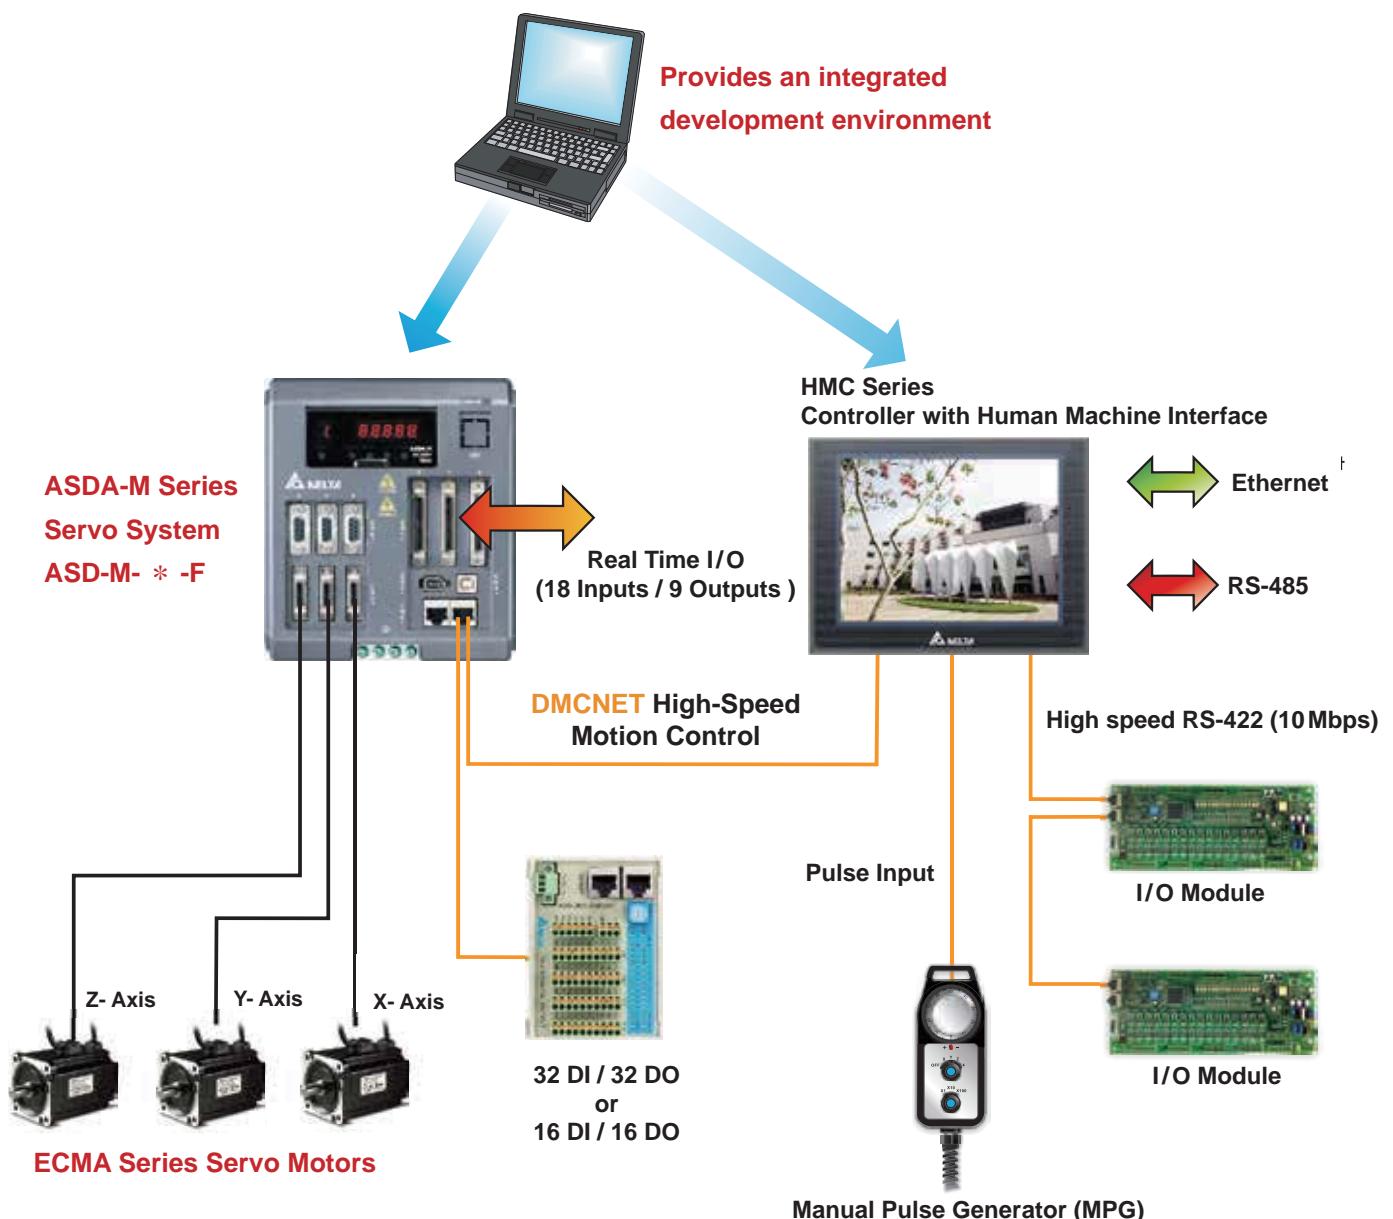

- A large amount of data and calculations among two axes can be completed with the same DSP (Digital Signal Processor). Precise synchronization is easy to achieve. This greatly increases the efficiency and performance of gantry control.
- In rigid or general mechanical systems, no matter if the loading on multiple axes is equal or not, the ASDA-M Series can perform precise motion control and drive each axis simultaneously.

# ASDA-M Series Features

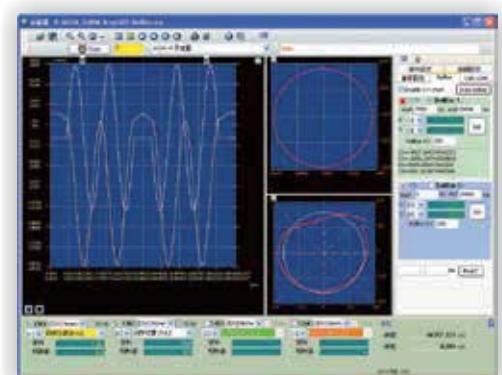

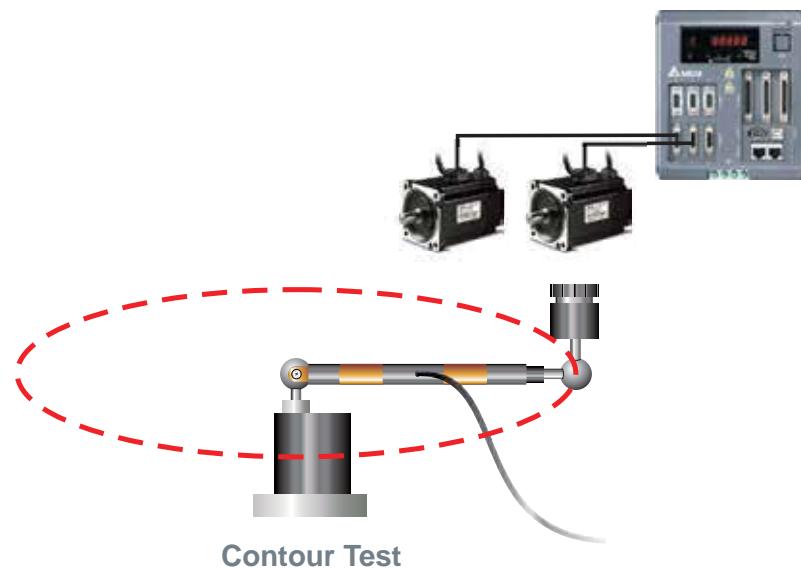

## Distributed Motion Control System - HMC Series serves as a Master

- Up to 10Mbps communication bandwidth is provided. It is capable of controlling 12 slave units within 1ms.
- With the aid of Delta's Controller with Human Machine Interface HMC Series, it offers the best combination of distributed systems to increase effectiveness.

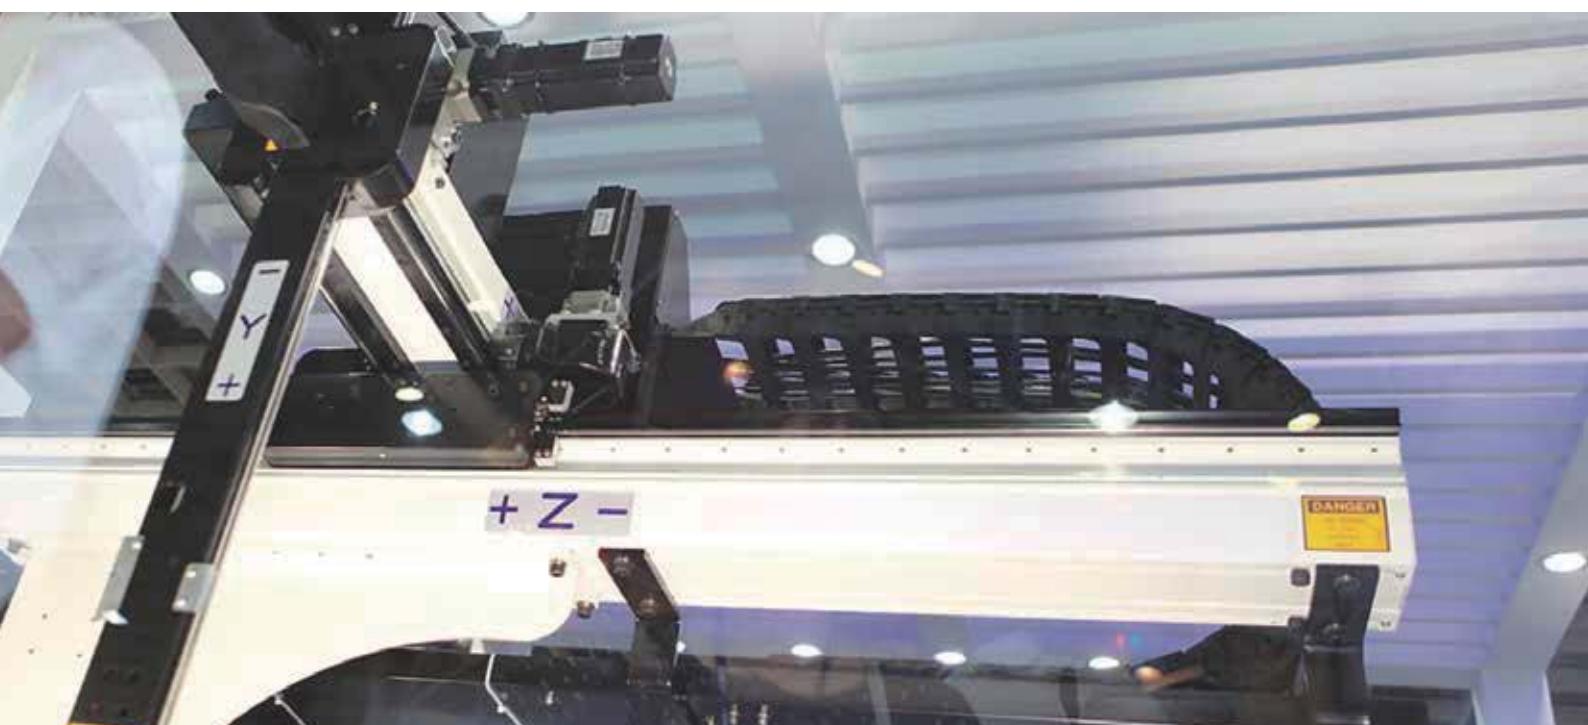

## Contour Analysis Function in ASDA-Soft

- Capable of monitoring the data of three axes simultaneously.
- Provides 2-axis surface trajectory display function for tracking and analysis.
- Capable of monitoring position commands and trajectory changes for contour error analysis.

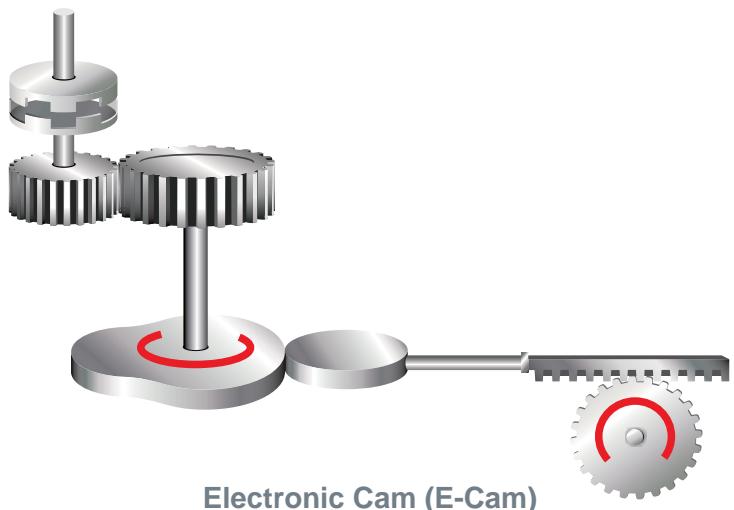

Contour analysis of position feedback signals between two servo motors

# ASDA-M Series Features

## Flexible Electronic Cam (E-Cam)

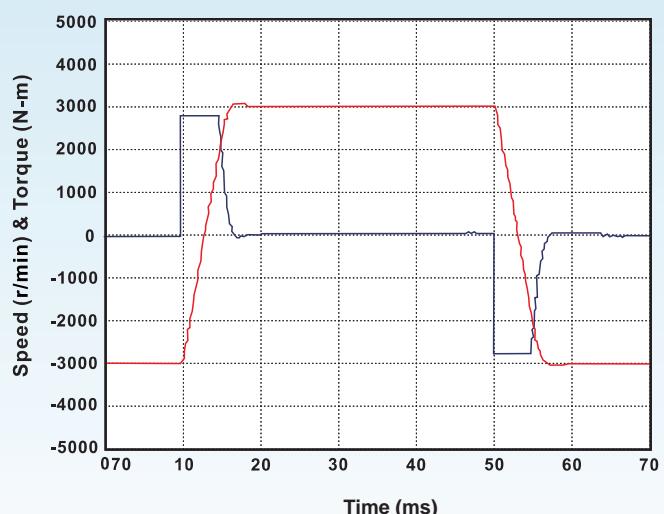

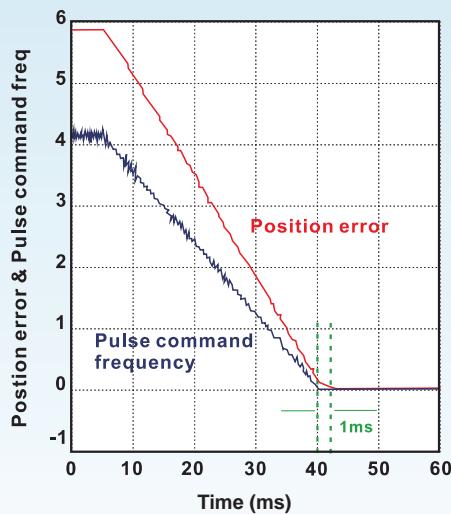

- A flexible mechanism that can be easily configured with three slave axes or only one master axis.
- The switch of slave and master axes is determined by parameter settings that users can change freely.
- ASDA-Soft configuration software provides E-Cam profile editing functions for easy tuning and adjustment.

## High Responsiveness

- Up to 1 kHz frequency response.
- Settling time below 1 ms.
- Takes only 7ms to accelerate from -3000 r/min to 3000 r/min.

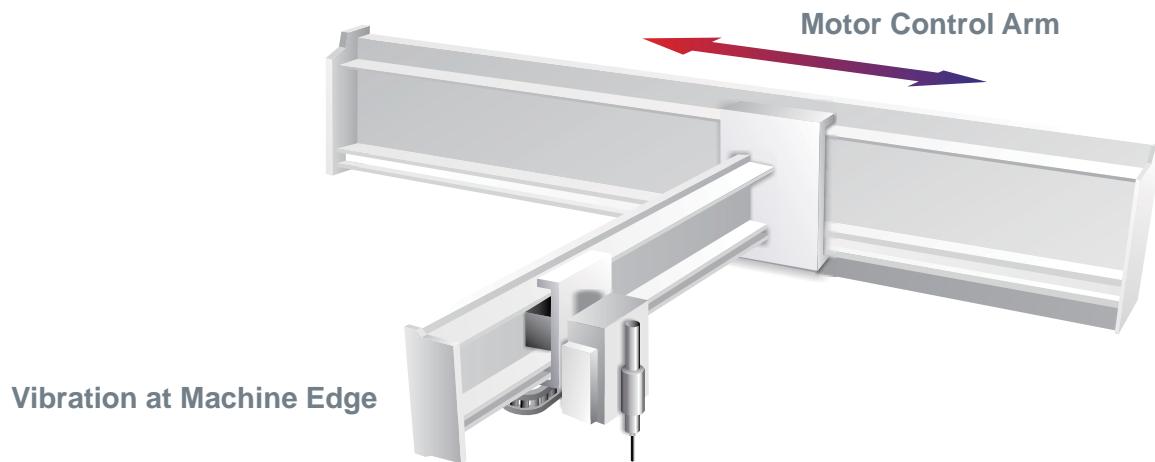

(Note: The test record of a 400W motor with 60 mm frame size)

## Excellent Suppression Functions

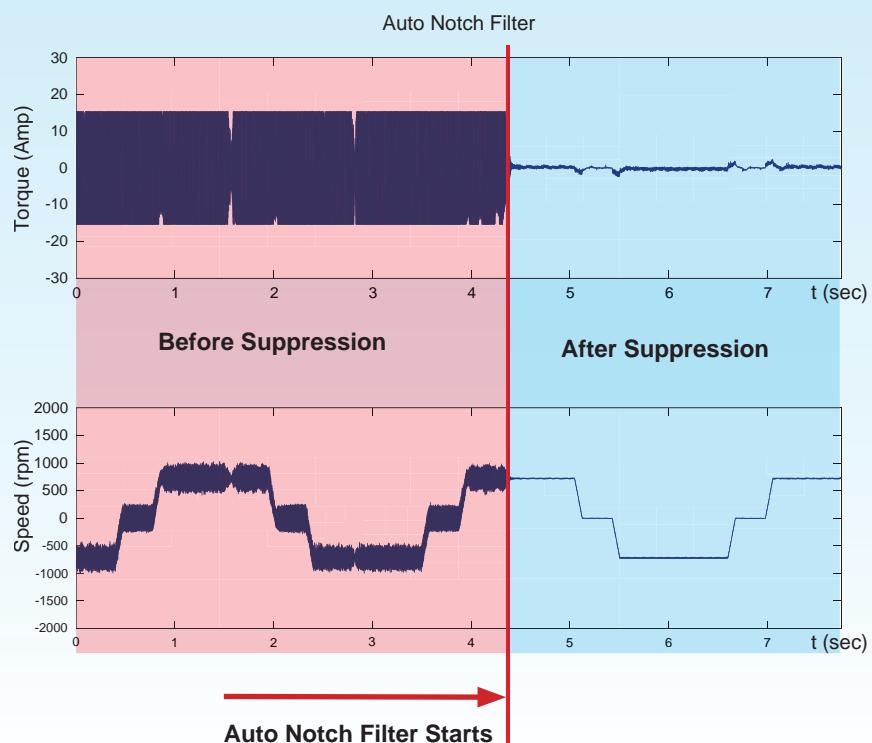

- Vibration Suppression (Low Frequency)

Two vibration suppression filters are provided for long arm systems to minimize the vibration at machine edges effectively.

- Resonance Suppression (High Frequency)

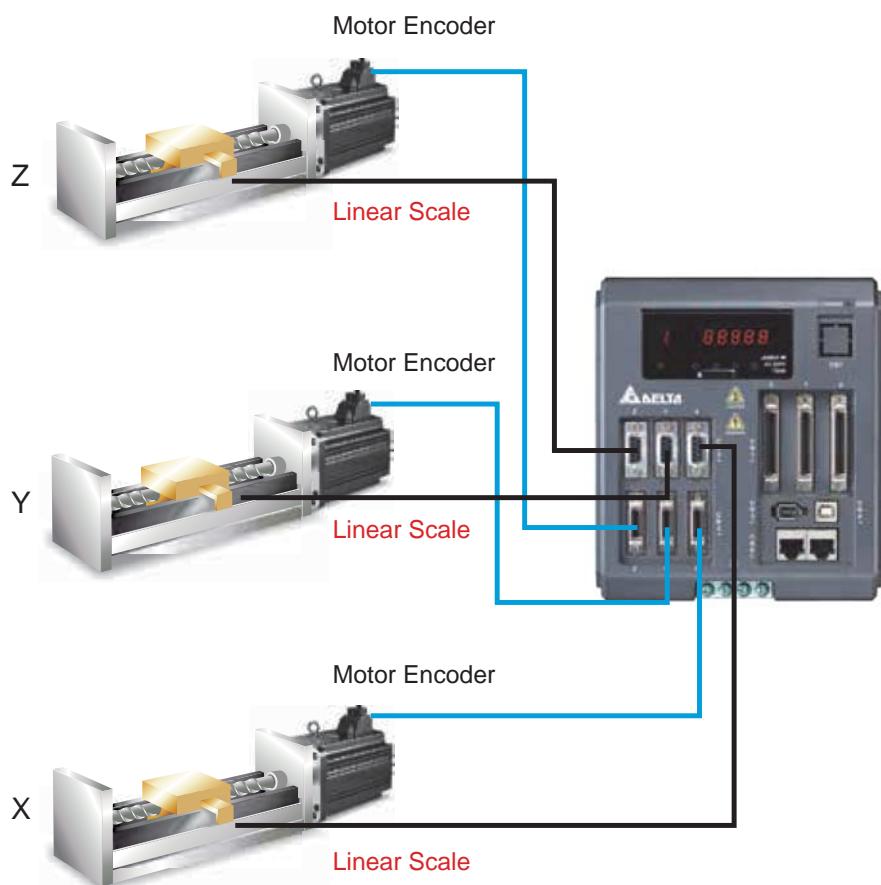

Two auto notch filters and one manual notch filter are provided to suppress mechanical resonance efficiently.

# ASDA-M Series Features

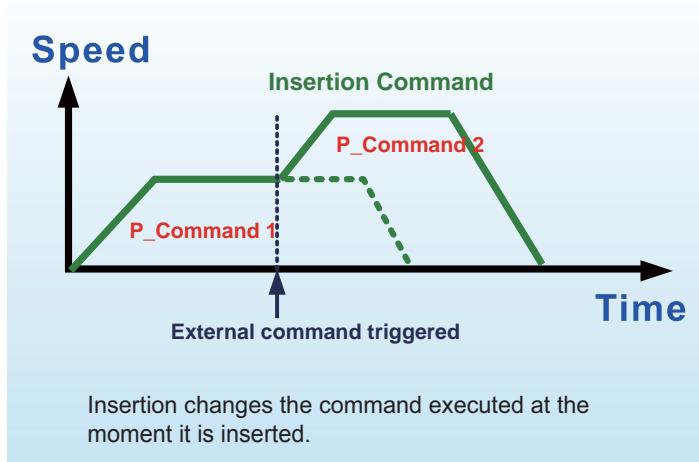

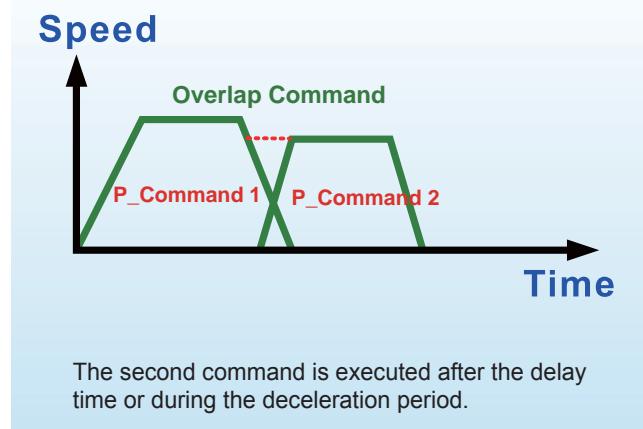

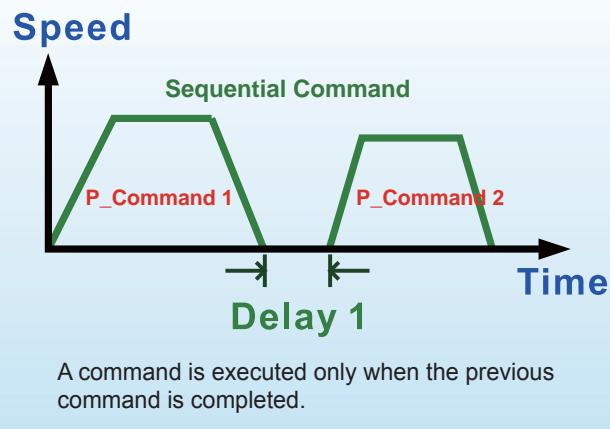

## Full-Closed Loop Control Function

- Reduces the effects of backlash and flexibility from the machine and ensures the accuracy of positioning.

## Versatile PR Mode

- ASDA-Soft configuration software offers a parameters editing function for different procedures planning.
- In PR mode, 99 procedures can be applied for three axes to enhance the ability of multiple points and continuous position control.
- Motion profile such as target position, acceleration and deceleration control can be changed instantaneously.
- Multi-axis synchronous motion movement is ideal for applications requiring high synchronous control accuracy and variable speed.
- 35 Homing methods / Jump mode / Write parameter mode / Single-axis speed mode / Single-axis position mode / Multi-axis linear interpolation mode / 2-Axis arc interpolation mode / 3-Axis helical interpolation / Vector speed change mode, nine kinds of PR modes are available for selection.
- Supports absolute commands, relative commands, incremental commands, and high-speed capture commands for accurate positioning control.

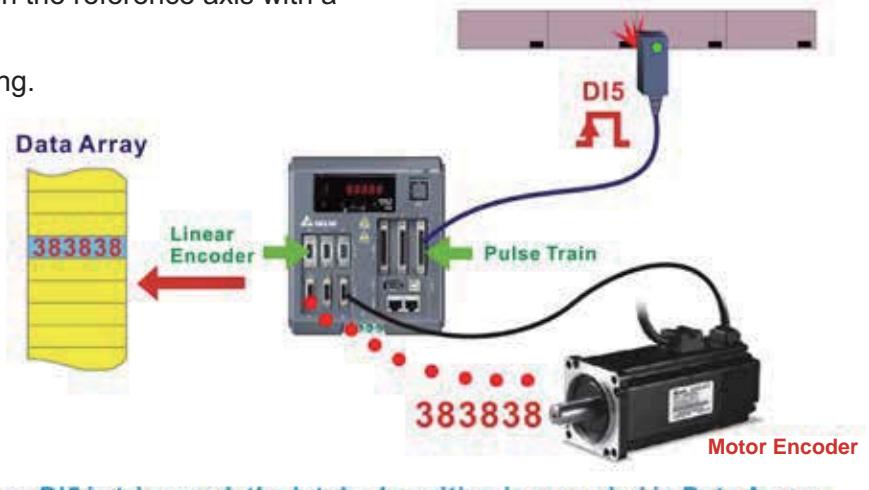

# ASDA-M Series Features

## Real Time Capture and Compare Functions

### Position Latch Function (Capture)

- Captures the coordinate value on the reference axis with a response time less than 8 $\mu$ s.
- It can be used to do mark tracking.
- Maximum 1500 records.

When DI5 is triggered, the latched position is recorded in Data Array.

Position Latch Function (Capture)

### Position Detection Function (Compare)

- Promptly outputs pulses upon the axis reaching the target position with a response time less than 5 $\mu$ s.
- It can be used for CCD camera applications.
- Maximum 1500 records.

When the record in Data Array is the same as the detected position, DO3 will output.

Position Detection Function (Compare)

## High-Accuracy Positioning

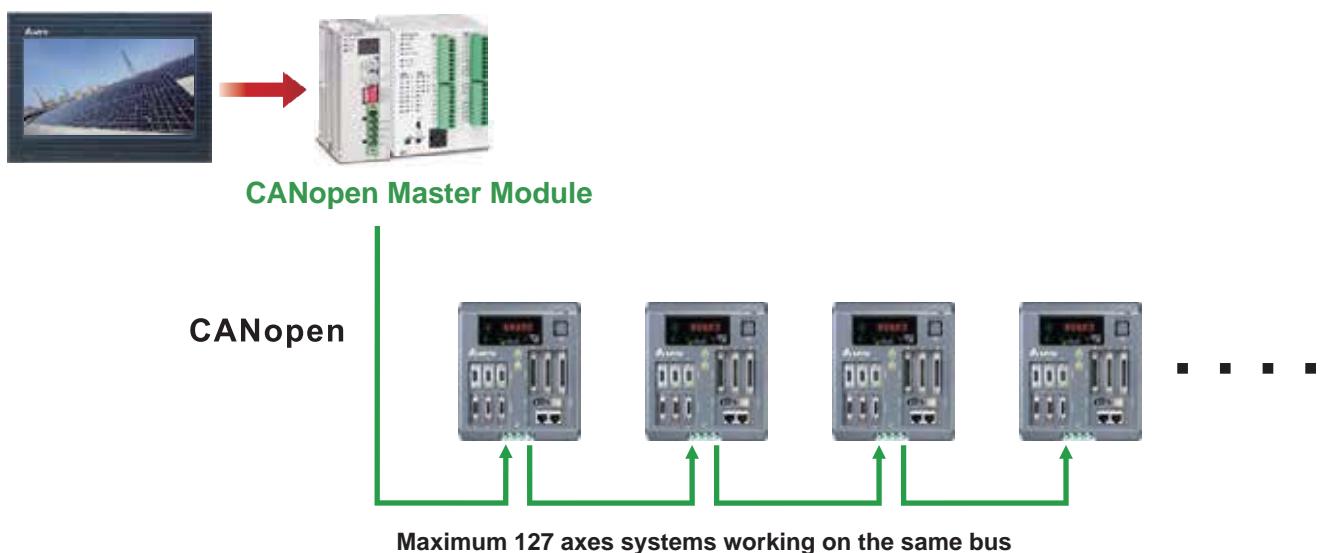

- ECMA Series servo motors feature incremental encoders with 20-bit resolution (1280000 p/rev) which can eliminate unstable commands at low speed, smooth motor operation and enhance the accuracy of positioning.
- Supports 17-bit absolute system.

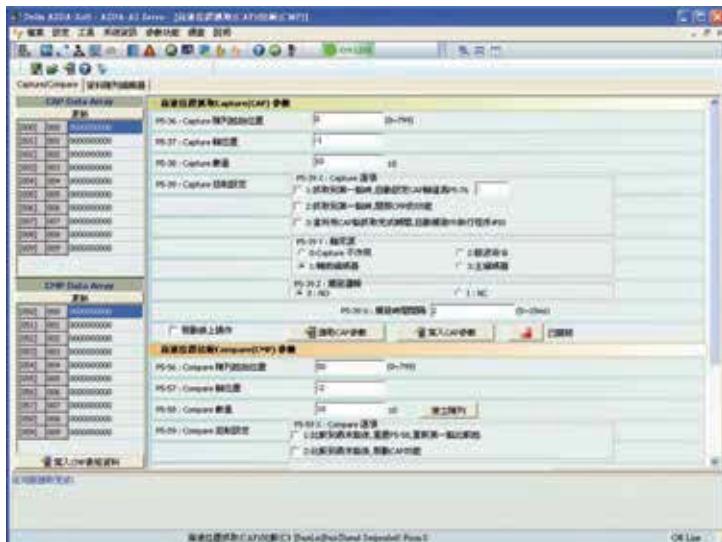

## Reliable Communication on High-Speed Motion Control Network

- Complies with CANopen DS301 protocol, providing up to 1Mbps communication rate.
- Capable of connecting to maximum servo systems in position, speed and torque modes through CANopen communication.

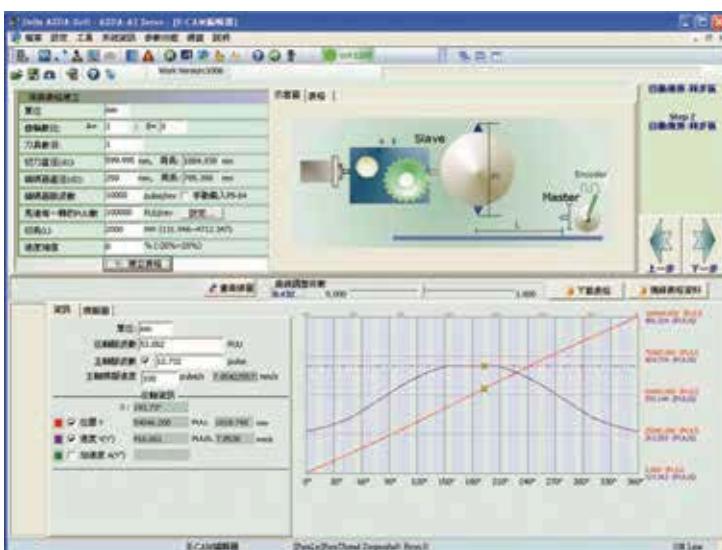

### Delta High-speed Communication Network

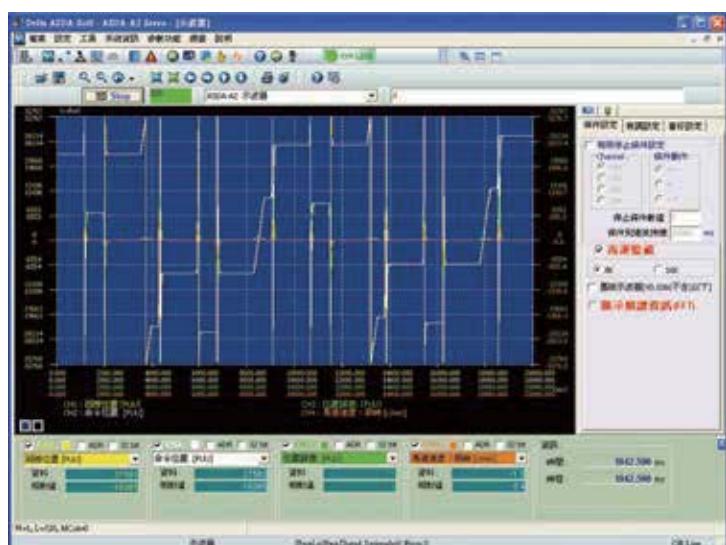

# ASDA-Soft Configuration Software

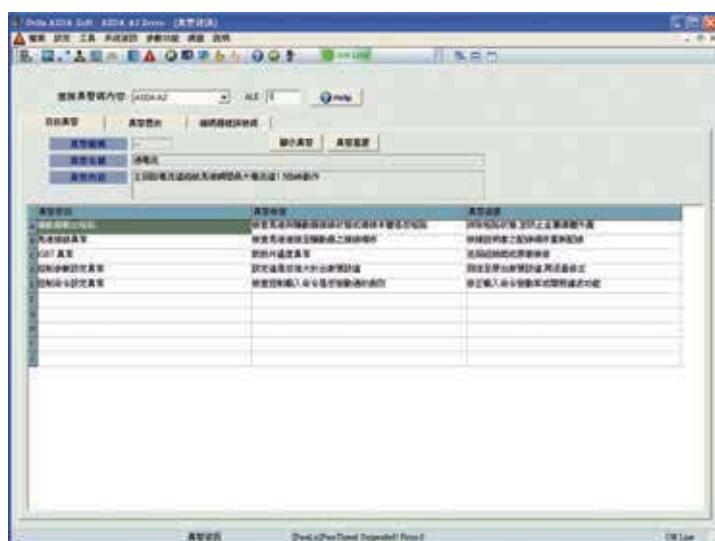

- Strong Capture and Compare functions for position latch and detection help you complete system configuration quickly.

- User-friendly E-Cam editing interface is provided for designing E-Cam profiles. Quick settings for flying shear and rotary cut applications are also offered.

- Versatile monitoring function, similar to a digital oscilloscope is able to quickly record the status and data of each axis. Real-time monitoring is easy.

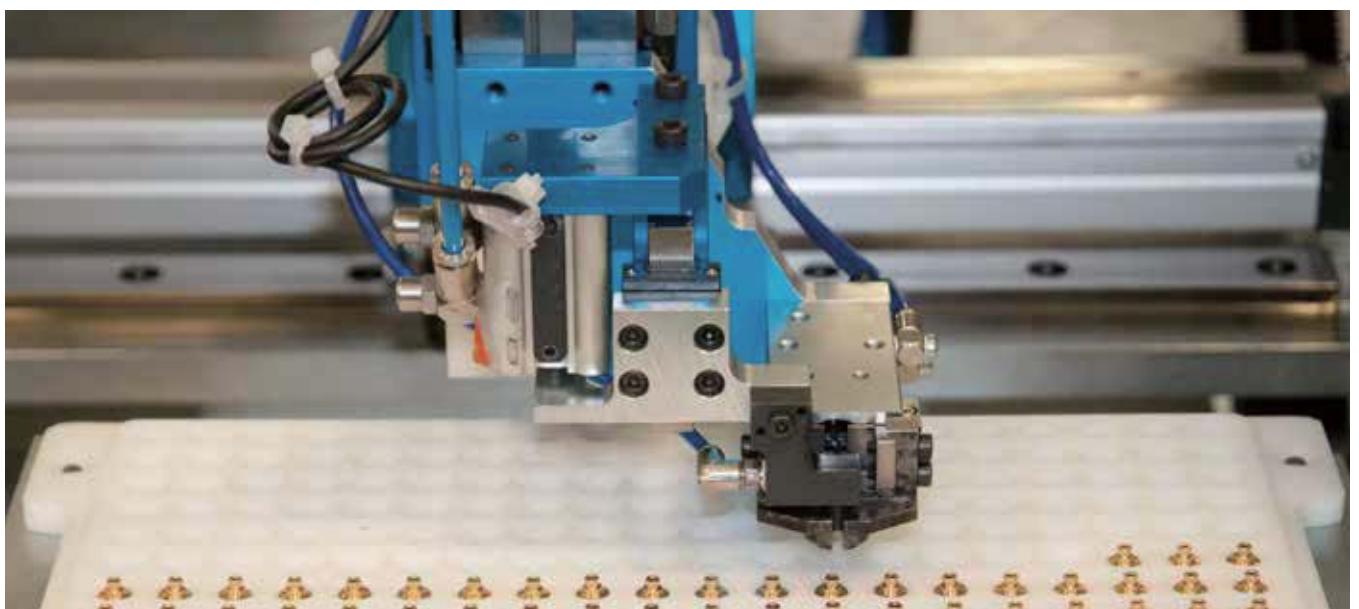

- Convenient alarm display function is capable of troubleshooting the system easily and recommending timely corrective actions.

- Easy-to-use editing interface is designed for new and enhanced PR control mode. Homing, point-to-point and other motion control functions for multi-axis positioning control are easy to achieve.

\*1. Rated rotation speed: With a full load, speed ratio is defined as the minimum speed (the motor will not pause).

\*2. When command is rated rotation speed, the speed fluctuation rate is defined as: (Empty load rotation speed - Full load rotation speed) / Rated rotation speed

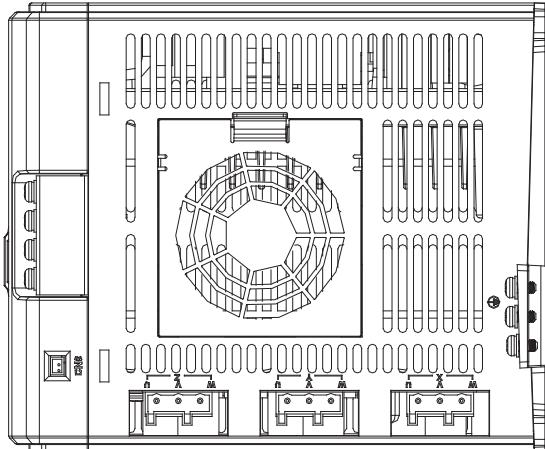

\*3. TN system: A power distribution system having one point directly earthed, the exposed conductive parts of the installation being connected to that point by a protective earth conductor.

## Servo Motor Features

**ECMA** Series servo motors are permanent AC servo motors. There are six kinds of frame sizes available: 40mm, 60mm, 80mm, 86mm, 100mm and 130mm. The motor speed is up to 5000 r/min and the torque output can reach 21.48 N·m.

In terms of optional configurations, the ECMA Series provides a brake and oil seals to fully support our customers' needs. It also offers two different shaft selections, round shaft and keyway, for various applications.

\*1. Rated torque values are continuous permissible values at 0 ~ 40°C ambient temperature when attaching with the sizes of heatsinks listed below:  
ECMA-\_\_ 04 / 06 / 08 : 250mm x 250mm x 6mm  
ECMA-\_\_ 10 : 300mm x 300mm x 12mm

ECMA-\_\_ 13 : 400mm x 400mm x 20mm

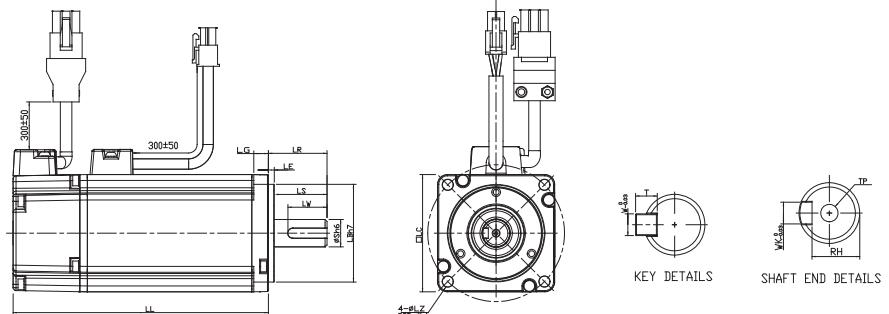

Material type : Aluminum F40, F60, F80, F100, F130

\*2. The holding brake is used to hold the motor shaft, not for braking the rotation. Never use it for decelerating or stopping the machine.

\*3. To reach the motor's max. torque limit of 250%, use the servo drive with higher watts.

# Part Names and Functions

## ● LED Display / Operation Panel

- **LED Display**

The 5 digit, 7 segment LED displays the servo status or fault codes

- **Operation Panel**

Function keys used to perform status display, monitor and diagnostic, function and parameter setting.

- **Function Keys:**

MODE: Press this key to select/change mode

SHIFT: Press this key to shift cursor to the left

UP: Press this key to increase values on the display

DOWN: Press this key to decrease values on the display

SET: Press this key to store data

## ● I/O Interface

- Used to connect Delta's DVP Series PLC or other external controllers for controlling I/O signals.

## ● Full-Closed Loop Control Interface

- Used to connect linear scale and encoder for controlling A, B, Z phase signals for inputs of X, Y, Z axes.

## ● Motor Encoder Interface

- Used to connect the encoder of the servo motor and feedback the signals to X, Y, Z axes of the servo drive.

## ● Serial Communication Port

- Used to connect PLC, HMI, and other controllers for RS-485 / RS-232 serial communication.

## ● Ground Terminal

- Used to connect grounding wire of power supply and servo motor.

## ● High-speed Communication Port

- Used to connect CANopen networks.
- DMCNE Tinterface, supporting motion modes for CANopen DS402 implementation.
- CANbus interface, supporting motion modes for CANopen DS402 implementation.

## ● USB Connection Port

Ver 1.1 USB is equipped as standard.

- Direct connectivity to personal computers or notebooks, capable of accessing data through ASDA-Soft configuration software.
- Remote monitoring speed via ASDA-Soft configuration software is up to 1 Mbps.

## ● Charge LED

- A lit LED indicates that either power is connected to the servo drive or a residual charge is present in the drive's internal power components.

### ● Control Circuit Terminal / Main Circuit Terminal / Internal & External Regenerative Resistor Terminal

- Control Circuit Terminal (L1c, L2c) L1c, L2c are used to connect 200~230Vac, 50/60Hz single-phase or three-phase power supply.
- Main Circuit Terminal (R, S, T) Used to connect 200~230Vac, 50/60Hz commercial power supply.
- When using an external braking unit, connect it to P<sub>⊕</sub> and ⊖.
- Internal & External Regenerative Resistor Terminal
  1. When using an external resistor, connect it to P<sub>⊕</sub> and C, and ensure an open circuit between P<sub>⊕</sub> and D.
  2. When using an internal resistor, ensure the circuit is closed between P<sub>⊕</sub> and D, and the circuit is open between P<sub>⊕</sub> and C. (Note: Please refer to the table of regenerative resistor specifications for the models with a built-in regenerative resistor.)
  3. When using an external braking unit, connect it to P<sub>⊕</sub> and ⊖, and ensure an open circuit between P<sub>⊕</sub> and D, and P<sub>⊕</sub> and C.

### ● Ground Terminal

- Used to connect grounding wire of power supply and servo motor.

### ● Servo Motor Output (U, V, W)

- Used to connect servo motor. Never connect the output terminal to main circuit power as the AC drive may be damaged beyond repair if incorrect cables are connected to the output terminals.

### ● Ground Terminal

- Used to connect grounding wire of power supply and servo motor.

The figures are for illustration purposes only. Actual models may differ slightly in appearance from illustrations provided.

# Optional Accessories

## ● Quick Connectors

- Used for 750W to 1.5kW servo drives
- One operating lever is provided for wire to terminal block insertion.

## ● Power Cables

- 3m and 5m standard cables are available.
- Customized service is offered to meet the needs of customers.
- Two types are selectable: with brake and without brake.

## ● Encoder Cables

- 3m and 5m standard cables are available.
- Customized service is offered to meet the needs of customers.

## ● RS-232 Communication Cables

- Connects ASDA-M to PLC, HMI, and other controllers via RS-232 communication.
- Standard cable length is 3m.
- Delta Part Number: ASD-CARS0003

### ● Terminal Block Modules

- Easy installation and wiring 0.5 m connection cable is provided.
- Easy to reduce the space required.
- Easy to expand system's I/O configuration.
- Delta Part Number: ASD-BM-50A

### ● Regenerative Resistors

- For selecting a regenerative resistor, please refer to the table of regenerative resistor specifications on page 50.

### ● USB Communication Cables (for PC)

- Connects ASDA-A2 to a PC (via ASDA-Soft configuration software)
- USB1.1 is equipped as standard.
- Delta Part Number: DOP-CAUSBAB

### ● CANopen Accessories

- Delta's TAP-CN03 distribution box connects ASDA-A2 to Delta's PLC CAN Master.
- For selecting CANopen accessories, please refer to the table of other accessories on page 49.

### ● RS-485 Connectors

- Used to connect multiple ASDA-M systems by RS-485 interface through Modbus serial communication.
- Delta Part Number: ASD-CNIE0B06

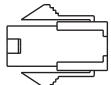

The figures are for illustration purposes only. Actual models may differ slightly in appearance from illustrations provided.

- 1) The boxes ( □ ) at the ends of the servo drive model names are for optional configurations. For the actual model name, please refer to the model explanation of the servo drive.
- 2) The boxes ( □ ) in the model names represent shaft end/brake or the number of oil seal.
- 3) The triangles ( △ ) in the model names represent encoder type. △ =1: Incremental encoder, 20-bit ; △ =2: Incremental encoder, 17-bit)

## Accessories Combinations

Other Accessories ( for ASDA-M Series all models )	
Description	Delta Part Number
50-Pin I/O Signal Connector (Cn1)	ASD-CNSC0050
Terminal Block Module	ASD-BM-50A
RS-232 Communication Cable	ASD-CARS0003
Communication Cable between Drive and Computer (for PC)	DOP-CAUSBAB
CANopen Communication Cable	TAP-CB03 / TAP-CB05
CANopen Distribution Box	TAP-CN03 / TAP-CN05
RS-485 Connector	ASD-CNIE0B06
Regenerative Resistor 400W 40Ω	BR400W040
Regenerative Resistor 1kW 20Ω	BR1K0W020
Regenerative Resistor 1.5kW 5Ω	BR1K5W005

## Safety Information

Global Standards	ASDA-M Series is designed to fully comply with demanding international standards, such as IEC and EN, and others. for all fields of industrial automation technology.
EMS Standard	EN61000-4-6 Level 3
	EN61000-4-3 Level 3
	EN61000-4-2 Level 2 and 3
	EN61000-4-4 Level 3 ※ in the process of application to EN61000-4-4
	EN61000-4-8 Level 4
	EN61000-4-5 Level 3
Conducted & Radiated Emissions	Complies with EN550011 Class A Group 1, with external EMC filter
CE Marking	CE recognized. Complies with Directive 2006/95/EC of the European Parliament and EMC Directive 2004/108/EC. ※ in the process of application to EMC Directive 2004/108/EC
UL Approval	UL (U.S.), cUL (Canada) recognized.
Test Standard	IEC/EN50178, IEC/EN60529
	IP20
Vibration	1G less than 20Hz, 0.6G 20 to 50Hz. Complies with IEC/EN50178
Shock	15gn 11ms. Complies with IEC/EN60028-2-27
Pollution Degree	Degree 2. Complies with IEC/EN61800-5-1

## Regenerative Resistor Specifications

Servo Drive (kW)	Specifications of Built-in Regenerative Resistors		Min. Allowable Resistance (Ohm)
	Resistance (parameter P1-52) (Ohm)	Capacity (parameter P1-53) (Watt)	
0.75	40Ω	60W	20Ω
1.5	20Ω	100W	10Ω
Note			■ When the fault, ALE05 (Regeneration Error) occurs, please increase the regenerative resistor capacity or decrease the regenerative resistor resistance. (The regenerative resistor resistance should not be less than the minimum allowable resistance listed in the above table.) ■ If the situation is not improved after increasing the regenerative resistor capacity or decreasing the regenerative resistor resistance, please purchase regenerative resistor module. ■ When combining multiple small-capacity regenerative resistors in parallel to increase the regenerative resistor capacity, make sure that the total resistance value of the regenerative resistors is not less than the minimum allowable resistance listed in the above table.

Smarter. Greener. Together.
