Outline

- Multi-language overview
- Multi-language configuration
- Globalization script

Purpose

After this chapter, you will learn...

- ... Basic operation and management of multiple languages
- ... The use of global scripts

Outline

- Multi-language overview
- Multi-language configuration
- Globalization script

➤ DIAView Multi-language overview

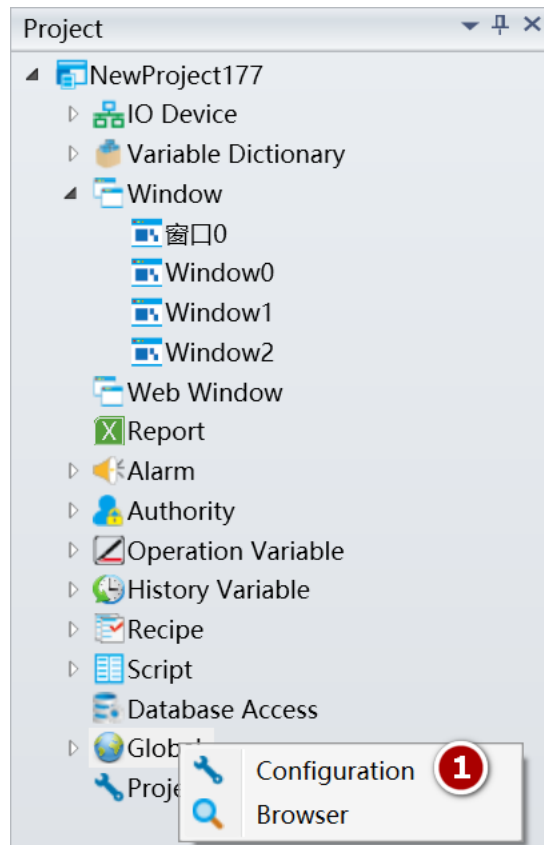

- Globalization provides users with the ability to extract the content of each functional module into the Multi-language resource list during development, and edit the extracted resources to achieve the function of freely switching between multiple languages in the **run-time** screen.
- The currently supported Multi-language resource types are: **string, picture, sound.**

- Multi-language overview
- Multi-language configuration
- Globalization script

➤ **Basic operation example of multi-language configuration:**

- ① Right-click the "Global" icon to open the "Configuration" configuration interface.

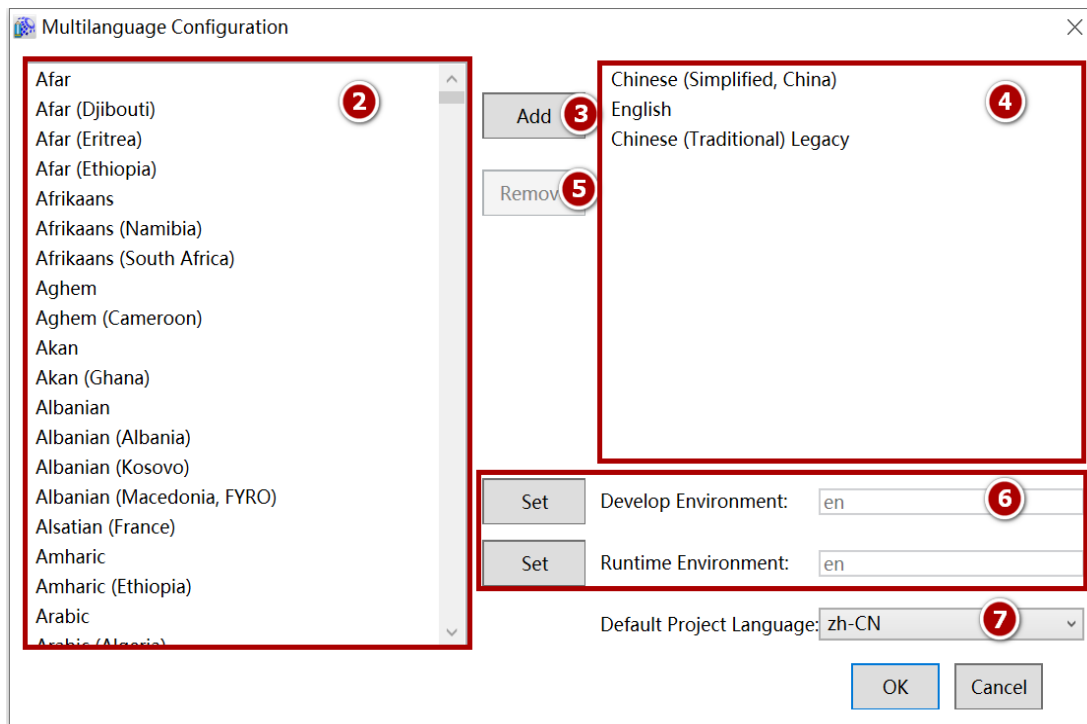

Multi-language configuration

Multi-language configuration

➤ Basic operation example of multi-language configuration:

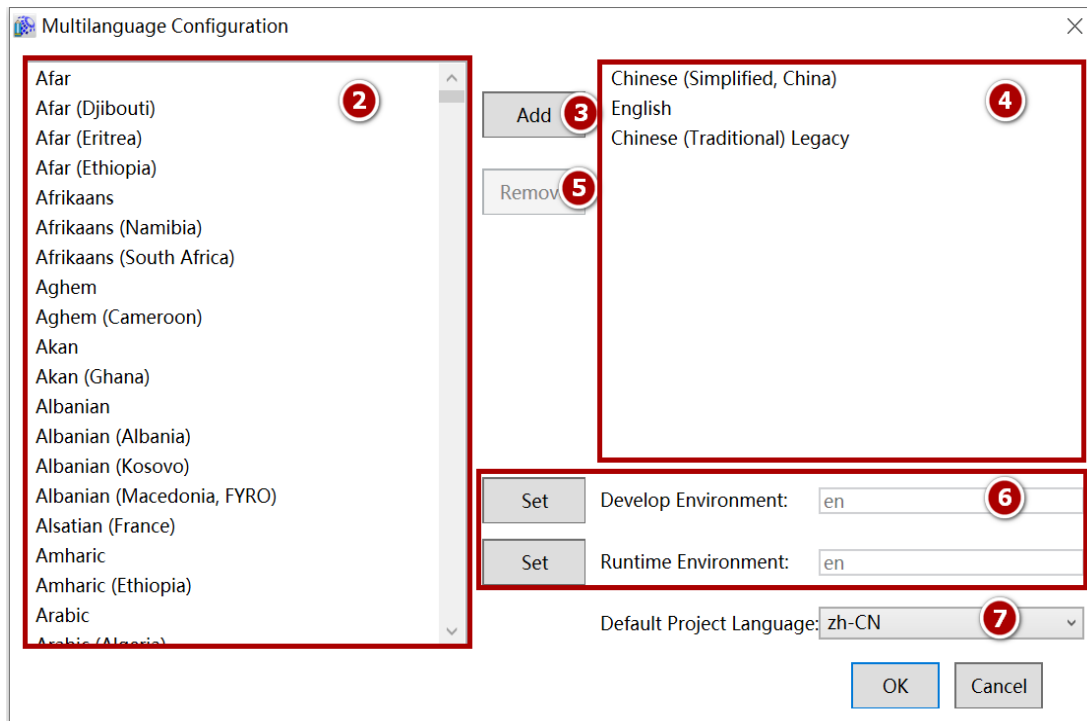

- ② Select the language you want to add in the language selection bar of the "Multilanguage Configuration" window.
- ③ Click the "ADD" button to add the required language to the global language bar.
- ④ The language type that the global language bar configuration is completed.
- ⑤ Select a language in the global language field and click the "Remove" button to remove the unnecessary language.

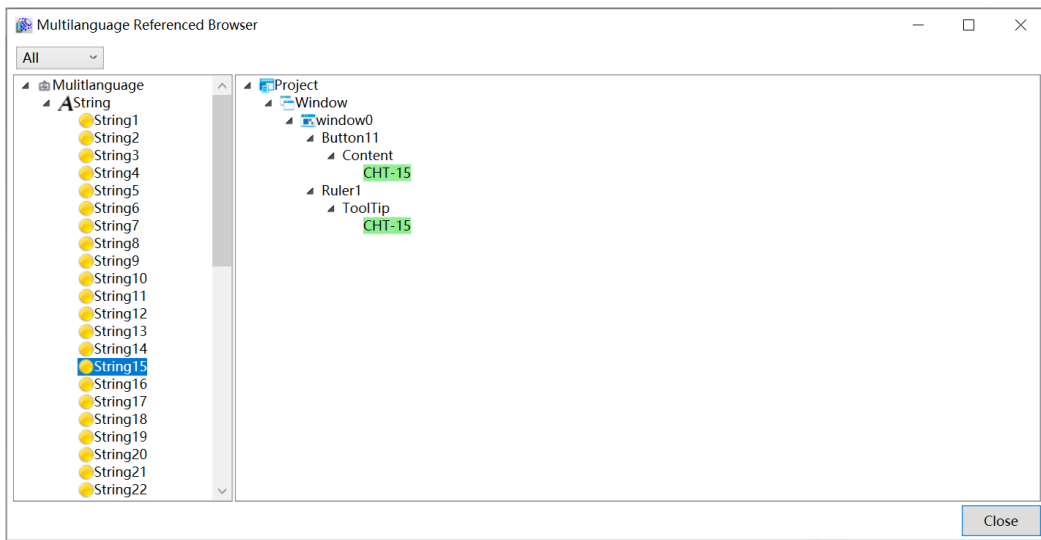

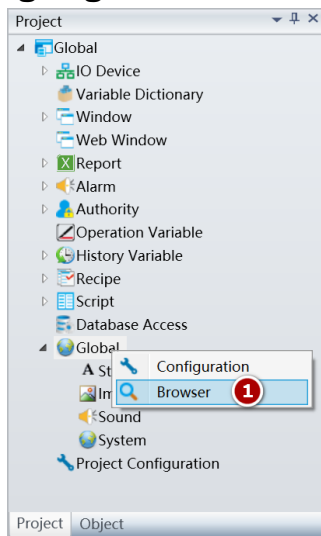

Multi-language configuration

➤ Basic operation example of multi-language configuration:

- ⑥ Select a language in the global language column, and click "Set" on the left side of the development environment and execution environment to set the default language of the environment.
- ⑦ Select a language in the project preset language column to set the default language of the project. Currently, the preset language supports Chinese Simplified, Chinese Traditional and English.

➤ Multi-language citation browsing

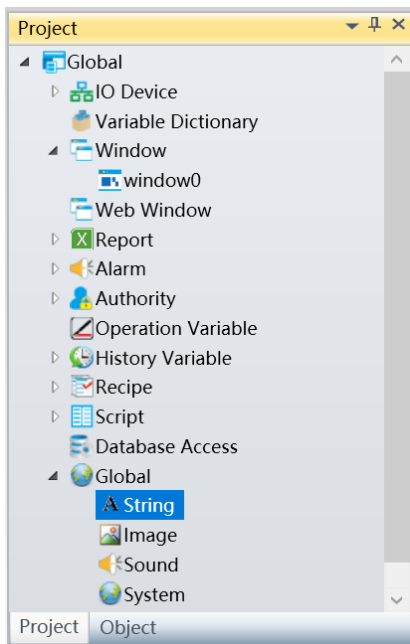

- ① Right-click the "Global" icon to open the **"Browser"** Multi-language reference browsing window.
 - On the left side of the multi-language reference browsing table is a multi-language tree directory, and on the right is the multi-language resource reference display window.
 - In the tree-like directory on the left, the round symbol in front of the resource is **"yellow"** to indicate that the resource has been referenced, and "gray" to indicate that it has not been referenced.
 - Select the resource to be viewed in the tree directory on the left, and the multi-language reference display window on the right will display all the objects in the project that use the resource.

Multi-language configuration

➤ Multi-language string configuration

- The **string** is a **text-type** resource library in the globalization function, and the user can customize it for editing.

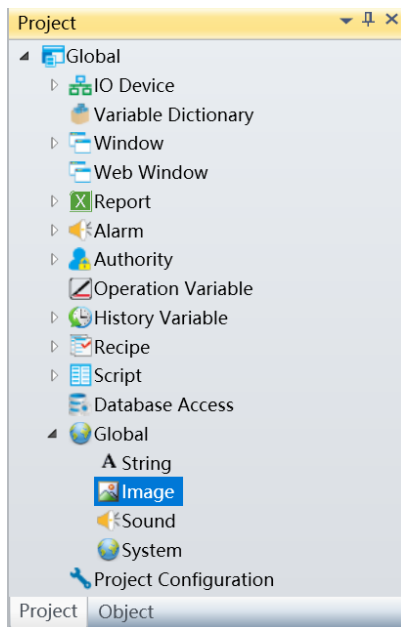

StartPage String x					
+ Add ↕ Insert ✖ Delete ✓ Clean ↶ Import ↷ Export Filter: <input type="text"/>					
	Name	Chinese (Simplified, C	Chinese (Traditional)	English	
1	String1	按鈕0	按鈕0	Button0	
2	String2	按鈕1	按鈕1	Button1	
3	String3	橢圓0	橢圓0	Ellipse0	
4	String4	配方0	配方0	Recipe0	
5	String5				

For the basic operation of multi-language character strings, please refer to "18.4 Character Strings" in the user manual.

Multi-language configuration

➤ Multi-language Image configuration

- The **Image** is the resource library of the picture path in the globalization function, and the user can customize and edit it.

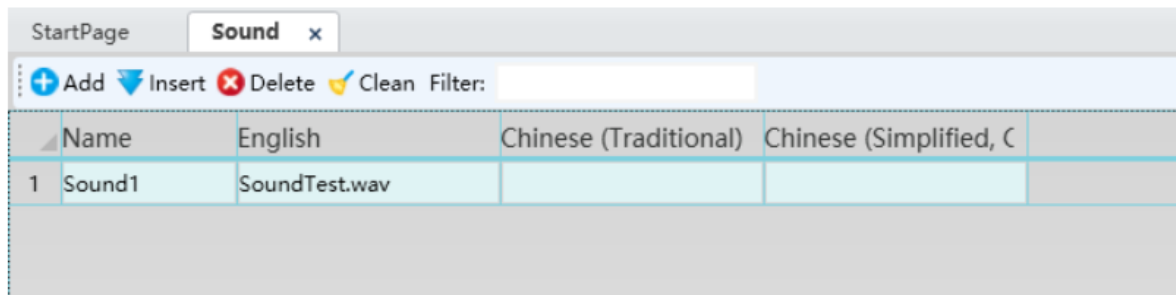

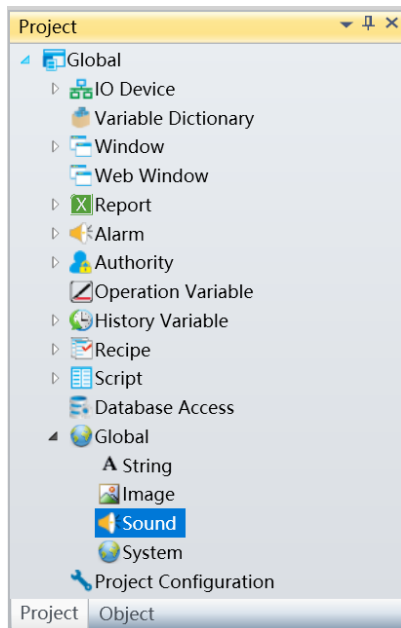

StartPage		Image x			
		+ Add + Insert ✖ Delete ✓ Clean Filter:			
	Name	Chinese (Traditional)	English	Chinese (Simplified, C	Akan
1	Image1	DefaultImage.jpg	桌面.jpg	57r58PICPiY_1024.jpg	timg1.jpg
2	Image2	DefaultGif.gif	timg.gif	timgBBK7H1YB.gif	timg1.gif

For the basic operation of multi-language Image, see "18.5 Pictures" in the user manual.

Multi-language configuration

➤ Multi-language Sound configuration

- **Sound** is a sound resource library in the globalization function, and users can customize it.

The screenshot shows the 'Sound' configuration window. It has a title bar with 'StartPage' and 'Sound x'. Below the title bar is a toolbar with buttons for 'Add', 'Insert', 'Delete', and 'Clean', followed by a 'Filter:' label and a text input field. The main area contains a table with the following data:

	Name	English	Chinese (Traditional)	Chinese (Simplified, C
1	Sound1	SoundTest.wav		

For the basic operation of Multi-language sound, please refer to "18.6 Sound" in the user manual.

Multi-language configuration

➤ Multi-language system operation configuration

- **System multi-language** means that the **system text** in the window is displayed in the specified language. The system multi-language includes the contents of the menu bar and drop-down box of advanced controls, and the menu bar at runtime.

Filter:

	Name	Chinese (Traditional)	English	Chinese (Simplified, C	Akan
1	HMI_WebBrowse	就緒	Be Ready	就绪	
2	HMI_WebBrowse	完成	Finish	完成	
3	HMI_WebBrowse	響應.....	Response.....	响应.....	
4	HMI_WebBrowse	網址	Address	地址	
5	HMI_WebBrowse	後退	GoBack	后退	
6	HMI_WebBrowse	前進	GoForward	前进	
7	HMI_WebBrowse	轉到	GoSearch	转到	
8	HMI_WebBrowse	首頁	HomePage	主页	

For the basic operation of Multi-language sounds, please refer to the user manual "18.7 System Multi-language".

Multi-language configuration

➤ Switch language operation on execution

- When the system is running, users can switch between multiple languages in the following ways:

- Multi-language overview
- Multi-language configuration
- Globalization script

➤ Global public approach

- When users configure window button events, screen programs, and user program scripts, DIAView provides simple and easy-to-use script properties and methods to complete some special tasks and functions.

The basic operation instructions of the globalization script are detailed in the user manual "20.3 Script Syntax and Functions → Programming Model → Globalization".

Smarter. Greener. Together.
